

# GIS Mapping Asset Management

## Legend

- Permits
- Wells

## Areas COGCC Analysis

COGCC Data as of 6/30/2008

## WHAT TO EXPECT

### SAVE TIME

Let our crews collect the data and do the mapping for you so your crews save time locating rigs, pipelines etc.

### IMPROVE EFFECTIVENESS

GIS improves the speed and accuracy of your business with quick identification of assets.

### INCREASE REGULATORY COMPLIANCE

Produce timely reports that summarize compliance levels through the status of resources in the GIS Database.

### BE AHEAD OF THE GAME

Speed up the permitting process on as-built projects by having your data up front and ready to go.

## Petroleum Field Services

## GIS Mapping and Asset Management

Geographic Information Systems, or GIS, is a system for capturing, storing and analyzing spatially referenced data. By utilizing the latest technologies in GIS, we are able to analyze, query, and visualize the data our crews acquire in an efficient and precise manner. We integrate all of our field and project data, which enables us to provide a complete map with pipelines, rigs, bodies of water, floodplains, wildlife, and more.

Let us map your assets so you have the information you need at your fingertips. Save time, improve effectiveness, and be ahead of the game.

**Capture your assets, store the information, and use it to analyze new business and old business.**
