- Engineering Services

## Petroleum Field Services

### Land Surveying

We take our surveys seriously—that's why we use GPS, or Global Positioning Systems. Static GPS, in conjunction with OPUS (On-line Positioning User Service) Solutions provided by the National Geodetic Survey, allow for extremely precise horizontal and vertical accuracies when used with RTK ( Real Time Kinematic) GPS.

All of our surveys comply with the C.O.G.C.C., Colorado Revised Statutes, and the State Board of Licensure for Architects.

We pride ourselves on maintaining the highest standards in our industry and we are always seeking better ways to help you and your company. Our expert service is unparalleled in the industry. Whether you need to stay on track or get caught up, you can count on PFS.

**Ask us about our package deals for all of your surveying, GIS, regulatory compliance, and permitting needs.**
